SKILLS

Technical Skills

- PHP, Python, SQL, JavaScript
- HTML, CSS, React, Tailwind
- Node.js, Apache, MariaDB

Cybersecurity

- Web App Pentesting
- Vulnerability Analysis
- Burp Suite, Wireshark, Nmap, SQLmap
- Threat Analysis

Cloud & Infrastructure

- AWS, Azure, Office365
- Linux (Kali, Ubuntu)
- Docker, Ansible, N8N
- VPN (Xray, VPS)

LANGUAGE

- Sinhala - Native
- English - Professional
- Korean - Basic

Professional Summary

Cybersecurity Specialist and Full Stack Developer with a strong focus on web application penetration testing, vulnerability discovery, and secure system design. Hands-on experience exploiting and mitigating real-world security flaws while building full-stack applications using PHP, Python, React, and SQL. Deeply familiar with Linux environments, cloud platforms, and automation tools. Exploring AI-assisted pentesting and workflow automation to increase efficiency and depth in security testing.

Education

- G.C.E O/L (A-3, B-4,C-2)
- CCNA (University of Moratuwa, Cisco Networking Academy)
- Azure, Microsoft server, Office 365 (NextGen Campus)
- Intensive Training on Windows Server and Network Engineering (NextGen Campus)
- Cloud Foundations for Aspiring IT Professionals (NextGen Campus)
- ACE Multicloud Network Associate (Aviatrix)
- Python Essentials (Cisco Networking Academy)
- Ethical Hacker (Cisco Networking Academy)

Projects & Contributions

Web Finder & Vulnerability Tool
Built a custom reconnaissance tool for HTML path discovery and vulnerability identification using Python and automated scanning techniques. (In progress)

Advanced Nmap Scanner
Developed an enhanced Nmap-based IP and web scanning framework to automate reconnaissance and support vulnerability analysis.

SQLmap GUI Utility
Created a graphical interface for SQLmap to simplify database enumeration during authorized penetration testing.

AI-Assisted Automation System
Developing an AI-driven system to automate security workflows, server management, and operational tasks. (In progress)

Linux VPS VPN Infrastructure (Xray)
Deployed and managed VPN servers on Linux VPS environments for secure tunneling and traffic optimization.

Infrastructure Automation (Docker, Ansible, n8n)
Built automated Linux server environments using containerization and configuration management tools.

Web Applications & POS Systems
Developed a PHP-based POS system, a React + Tailwind online store, and a production-ready safari booking platform with secure backend logic.
